

# New Product Announcement

## **SAILBOAT SUPPORT PODS**

### ***GALVANIZED PODS ADJUSTABLE HEIGHT***

### ***CARPETED KEEL SUPPORT***

*Load Rite has developed a modular sailboat support system designed to adapt a wide range of sailboats to our trailers. Utilizing these components in various combinations allows a wide variety of standard and custom sailboats to be adapted to our basic single and tandem axle trailer models.*

*The support pods are galvanized and fully adjustable in a range from 16" to 44" above the crossbar surface. The carpeted support pads provide hull stability at four points with no damage to fiberglass or wood hull components.*

*The keel support consists of a series of carpeted and adjustable bunks designed to support and capture the keel both vertically and horizontally.*

*The winchstand can be ordered to size, and allows the winch support to be properly adjusted to the bow eye level of the boat.*

#### **STANDARD FEATURES**

- Galvanized steel pod components
- Galvanized steel winchstand
- Carpeted pads
- Adjustable pod stanchions
- Adjustable winch support
- Adaptable to many boats and trailers

*This system is available on many trailer models to accommodate a variety of sailboats. Contact Load Rite for an application specification and pricing.*
